PROFILE

Computer Science graduate and AI Strategy Analyst at Accenture, making the natural transition into a pure Software Engineering role. Over the past year and a half, I have operated directly at the intersection of AI Strategy across the software development lifecycle and its technical execution, helping scale GitHub Copilot to thousands of developers, driving an onboarding chatbot to production, and enabling engineering teams across the bank to adopt AI tooling in their day-to-day work.

Beyond my day job, my real passion is building software. I work across the stack in modern technologies (TypeScript, Node.js, React and PostgreSQL) designing, building and deploying applications end to end. I dedicate much of my own time outside of work to deepening engineering fundamentals and building with AI, from writing cleaner, tested code to experimenting with how LLMs can be used well in real applications. I'm looking to bring that blend of enterprise delivery experience and genuine drive to grow as a software engineer, to an ambitious, tech-first team.

CORE TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL, HTML5, CSS3
- **Frameworks & Libraries:** React, Node.js, Express, Vite/Vitest, Zod
- **Tools & Methods:** Git, GitHub, REST APIs, CI/CD, Scrum (PSM I)
- **AI & Developer Tooling:** GitHub Copilot, prompt engineering, LLM-assisted development, SDLC tooling adoption

EXPERIENCE

AI Strategy Analyst - Accenture

Jun 2024 – Present

AI Across the SDLC - Major Tier 1 Investment Bank (~4,000 developers, Mar 2026 – Present)

- Serving as a core member of the central delivery team, translating fragmented inputs from multiple workstreams into clear, outcome-focused summaries for the bank's CTO and UK leadership.
- Co-developed the engagement and adoption operating model and helped design and document a tiered champions network now live across the engineering organisation, with regular governance, feedback capture and escalation routes.
- Coordinated the response to a GitHub Copilot billing model change that reduced developer AI credits, authoring targeted messaging and recommendations for senior stakeholders, stream leads, and developers to transition 500+ users to the correct GitHub Copilot licenses without disruption.
- Contributed technical documentation and minor tooling updates for an internal security vulnerability remediation suite utilising TypeScript, Node.js, Fastify, and MCP servers.

GitHub Copilot Rollout - Major Tier 1 Investment Bank (Jun – Dec 2025)

- Scaled developer tool adoption from 50 to 2,000+ licensed engineers in six months as a core member of the delivery team, managing enablement strategies across the engineering organisation.
- Owned the end-to-end delivery of a Copilot onboarding chatbot built on the client's internal infrastructure. The tool has successfully handled 2,000+ developer queries from 600+ active users to directly support Copilot adoption.
- Drove SonarQube adoption to 98% of the licensed engineer base by delivering structured communications to 1,200+ developers, and authoring intranet enablement content ahead of business manager handover.

Sales Analyst - Financial Services Sales Team UKIA (Jul 2024 – Jan 2025)

- Co-created an origination initiative across 12 financial services accounts (banking, insurance, capital markets), driving small-deal (sub-\$5M) origination ideas that generated a \$40M+ qualified pipeline and \$2M+ in won revenue.
- Designed and built a Power BI dashboard aggregating thousands of Salesforce data points, becoming the central feature of weekly leadership reporting across the initiative.
- Supported RFP submissions and deal-shaping across a global insurer (~\$20M won) and a central bank (two RFPs, 13-day turnaround, ~\$10M won), drafting sections and coordinating approvals.

Other contributions

- Built RevBot, an internal Copilot agent recommending Accenture-approved AI tooling based on project requirements, engineering the system prompt and input/output structure for consistent responses.
- Facilitated a weekly global AI working group for senior leadership on a Diamond-level client account, producing staffing and commercial reporting with visibility on a \$150M+ opportunity pipeline.

PROJECTS

Habit Tracker - Fullstack Web Application

Mar 2026 - June 2026

Live: [habit-tracker-sepia-beta.vercel.app](#), Repo: [github.com/jckstllrd/habit-tracker](#)

- Architected a decoupled full-stack habit tracker application, deploying a React/Vite frontend on Vercel and an Express/Node.js RESTful API on Render to manage complete CRUD data lifecycles.
- Implemented custom JWT authentication from scratch using bcrypt and custom Express middleware, securely managing token lifecycles and protecting routes without external libraries.
- Optimised backend performance by offloading habit-streak calculations directly to the PostgreSQL database layer using a raw SQL gaps-and-islands query pattern.
- Enhanced API reliability and security by leveraging Zod to enforce strict schema input validation across all incoming server requests.

Personal Site & Portfolio - jackstallard.dev

June 2026

Live: [jackstallard.dev](#), Repo: [github.com/jckstllrd/personal-site](#)

- Built and deployed a responsive personal site with React, TypeScript and CSS Modules, structuring the UI into reusable components (layout, navigation, article / project cards) shared across pages rather than one-off markup.
- Implemented a mobile-first responsive layout, including a collapsible navigation menu triggered by a media query breakpoint on smaller screens.
- Used the site as a platform for technical writing, with plans to build a proper content system for publishing future articles directly through the site.

FPmL - Fantasy Premier League ML Optimiser

Jan 2023 - May 2023

Repo: [github.com/jckstllrd/FPmL](#)

- Built an end-to-end Python pipeline that scrapes and merges two football data sources (FPL and FBRef) into a dataset of ~24,000 player-gameweeks with 180 engineered features, using pandas for data cleaning and feature engineering.
- Trained and tuned Random Forest and XGBoost models with scikit-learn (grid search, randomised search, cross-validation) to predict player points from historical performance data.
- Formulated squad selection as a linear programming problem using PuLP under real FPL constraints (£100M budget, position quotas, max three players per club), feeding model predictions into the optimiser to automate transfer decisions.
- Simulated a full 38-gameweek season with automated transfer and chip logic, benchmarking six model configurations against a baseline; the strongest model placed in the top third of real players under standard rules.

EARLY EXPERIENCE

Management Consulting Analyst - Accenture Summer Placement

Jul 2022 - Aug 2022

- Partnered with The 93% Club, a charity supporting state-educated students and professionals, on a three-week brief to improve the UX of their website and propose new ideas for how it could better serve users.
- Researched the charity's mission and audience, then designed and wireframed front-end pages for the team's final client pitch, applying core UI/UX principles.

Management Consulting Analyst - Accenture Internship

Sep 2019 - Apr 2020

- Analysed the sentiment of UK environmental discussion collated from Twitter, synthesising the findings into a strategic proposal presented to Parliament.
- Completed foundational enterprise workplace training and supported delivery work for financial-services clients including Close Brothers and Lloyds Banking Group.

EDUCATION & CREDENTIALS

University of Exeter - BSc Computer Science, 2:1

Sep 2020 - Jun 2023

- Notable modules: *Artificial Intelligence & Applications* - 79%, *Data Structures & Algorithms* - 90%, *SWE* - 80%
- Dissertation: FPmL - Machine learning and linear programming for optimal Fantasy Premier League team selection.

Professional Scrum Master I (PSM I)

Jan 2026

COMMUNITY & INTERESTS

Health & Wellbeing Lead for Accenture's AI & Data practice: write a recurring wellbeing newsletter section, co-lead the practice's weekly all-ability run club, and co-led a Movember campaign that raised £1,200+ for men's mental health.

Interests: Behavioural science and habit formation, football, running, cycling, vinyl
